

Provincial and federal legislation compels municipalities to keep detailed records regarding the activities of their fire departments, some of which must be reported to provincial agencies such as the Office of the Fire Commissioner. Off-the-shelf software can be used for record keeping and reporting but may not always fit the unique needs of municipalities or meet legal and privacy responsibilities. Creating a customized and securely managed system can be cost-prohibitive for many departments and municipalities. The **FRS@OPEN[AXIS]** co-operatively owned fire incident reporting system is the solution to this dilemma.

FRS@OPEN[AXIS]

FRS@OPEN[AXIS] is part of The Partnership of the Manitoba Capital Region's **OPEN[AXIS]** data platform. This cost-efficient and user-friendly fire department incident reporting system is now offered to all Manitoba municipalities. In collaboration with our partners and input from fire department personnel across Manitoba, this made-in Manitoba web-based reporting system is being offered at an incredible value due to its shared system infrastructure and collaborative software development.

Reporting System Highlights

Feature	Description
Strict but customizable access	Access to the reporting system is governed by strict permission protocols. These can be customized to the needs of the municipality.
Data privacy and security	Data privacy and security are of utmost importance when personal information is collected. Both the primary server and off-site backup for FRS@OPEN[AXIS] are situated in two, highly secure datacentres in Winnipeg, MB.
Web-based	Any web-connected device can access the system from anywhere there is internet.
Asset management	Equipment details including maintenance, scheduling, and replacement are recorded to provide insight for operations and budgeting.
MPI claim submissions	Automatically generate claims and invoices for reimbursement from Manitoba Public Insurance.
OFC reporting	Opportunities are currently being explored to streamline reporting to the Office of the Fire Commissioner using the FRS@OPEN[AXIS] reporting template.
Cost-efficient & centrally managed	The co-operatively owned and maintained FRS@OPEN[AXIS] system provides a custom and expertly managed platform at a rate that is affordable for municipalities both large and small.
